

Tissues Review

1. What are the four primary types of tissue in the body and what are their main functions?
2. Summarize the four essential functions of epithelial tissue.
3. What is the functional difference between microvilli and cilia on the exposed surfaces of epithelial cells?
4. How do the processes of merocrine, apocrine, and holocrine secretion differ?
5. What three basic components are found in all connective tissues?
