

C. Given a table of derived characteristics (traits), create cladogram.

Taxa

Characters	Shark	Bullfrog	Kangaroo	Human
Vertebrae				
Two pairs of limbs				
Mammary glands				
Placenta				

- Place an **X** in the chart that **apply** to each organism.
- Count the **number of characteristics** each organism has.
- This will be the order that you place the organisms in the **cladogram** (the organism with the fewest traits is on bottom, left)
- Convert the **table** into a cladogram.

Try this one. Convert the table into a Cladogram

Character	Earthworm	Trout	Lizard	Human
Vertebrae				
Legs				
Hair
