

COYDOGS, AND LYNXCATS, AND PIZZLIES ON MY!

Thanks to human activity, native animals and plants are expected to hybridize more often than ever.
Is that a problem or a solution? (Think about it)

Pros to hybridization	Cons to hybridization

1. In your group, come up with two **pros** and two **cons** of hybridization and list them in the table above.
2. Create and name a new and unusual hybrid species. List the parent species. State its habitat. Describe how its characteristics allow it to survive in its habitat. (You must use real organisms and you cannot breed plants with animals, or insects with animals.)

New hybrid species name _____

Parent species of hybrid _____

Habitat _____

Characteristics for survival:

3. Draw and color a high quality, detailed illustration of your organism in the box below.
